

INTERACTIVE GLASS

Engage Production can transform standard glass into a fully interactive platform, by utilising flexible, projected capacitive touch-screen Foils. These transparent, flexible foils can be applied to and work through any non-metallic material – making them ideal for an extensive range of interactive applications up to 100inches diagonal. These include: LCD and also rear-projection touch-screen integration; LCD overlays, through-glass touch; and touch tables. All of the touch screen components are sealed safely behind glass which can be up used on glass windows up to 25mm thick.

We can retrofit any shop window into an interactive play space and turn any non-interactive large format kiosk from a passive advertising display into an engaging customer experience. We can essentially offer a flexible touch screen that can be made to any size between 30inches and 167inches. Single touch options and new dual touch overlay films, sizes can be from 25inches to 167inches.

Benefits

- Upgrade existing displays
- Interactivity to wide range of displays
- Works through any non-metallic material
- Custom sizes
- Integrates into a range of display technologies
- Not affected by dust, dirt, chewing gum, or liquids
- Works with gloved hands
- Ideal for external applications
