

MULTITOUCH CELLS

Engage Production is at the cutting-edge of multi-touch technology, with the best products and unrivalled know-how. We can supply, install, support & create whatever it is you want to feature on these multi-touch multi-user marvels – whether for on-wall or table, single or multi-unit solutions. We're exclusive reseller & content provider for **Multi-Touch Ltd**, of Finland.

Multi-Touch Ltd displays are Full HD LCDs, stackable (up to 24 cells) into any size table or wall and support multiuser environments. Unlimited touch points, hand recognition, and object recognition on Windows, Linux and OS X. U-Touch overlays are lightweight and utilise specially developed Optical Sensing technology.

Multi-Touch Ltd technology is the only multitouch system to recognise and differentiate between users' hands, and recognise objects and barcodes. In addition, it is the only available touch technology integrated to the LCD back-light plane. Screens are Full HD LCD panels. Cells are durable with an expected lifetime of 60,000 hours, and can run on Linux, Windows and OSX.

The **MultiTouch Cell Advanced** can simultaneously track an unlimited number of users –tracking users' hands, not just points of contact. It's less than 30cm deep and weighs just 37kg.

MultiTaction is a new super-thin (20cm) platform for large-scale multitouch LCDs. It allows you to create full-HD multi-user, multitouch displays for screens ranging from 32 to 100inches and beyond – with the same thin depth (11cm at the edge; 20cm in the middle). Stackable to 24 cell arrays, the first model available is 55inches.

Engage is also partnered with **U-Touch** on special projects for bespoke overlays on large format screens. Please see our Multi-touch Overlays document for further information.
